Pupil: _____ **DOB:** _____

DESCRIPTION OF CONDITION: HYDROCEPHALUS AND VP SHUNT

Hydrocephalus usually develops when fluid (CSF) is produced and absorbed at an unequal rate, causing increased pressure in the child's head. A shunt is inserted and the shunt diverts the flow of CSF from the ventricles into another region of the body, most often into the abdominal cavity.

TYPE OF HEALTH CARE NEEDED:

1. BE ALERT FOR SIGNS AND SYMPTOMS OF SHUNT MALFUNCTION

COMMON SYMPTOMS:

1. FEVER
2. VOMITING
3. HEADACHE
4. CHANGE IN LEVEL OF ALERTNESS AND BEHAVIOR
5. LETHARGY
6. DECREASE IN APPETITE
7. VISUAL DISTURBANCES, (ex: downward eye gaze and difficulty focusing eyes.)

TREATMENT:

Contact parent immediately

IMMEDIATE DANGER

COMMON SYMPTOMS:

1. Seizures
2. Cessation of breathing

TREATMENT:

- | | |
|------------------------------------|----------------------------------|
| 1. Use seizure guidelines | 3. Call 911 |
| 2. Initiate CPR if breathing stops | 4. Call parents & District Nurse |

2. MONITOR FOR SAFETY ISSUES- AVOID BLOWS TO THE HEAD

TREATMENT:

1. Notify parent immediately if any type of head injury occurs at school.

1. PARENT (S)
2. PHYSICIAN:
